### How can I hide a program to system tray with AutoHotKey on startup?

The software I want to minimise to the system tray/(run in background) is located on C:\

<https://www.autohotkey.com/docs/commands/WinMinimize.htm>

Write a small script that minimizes that specific window, run it at startup.

`SetBatchLines -1``ListLines, Off``SetTimer, Hide_Programs, 4000 ; this checks every 4 seconds for the programs you want to hide``Return``Hide_Programs:` `; Example: Skype Feedback Window` `SetTitleMatchMode, Regex` `WinClose, ^Skype.*Call quality feedback$` `; Example: TeamViewer "Sponsored session" Window` `if WinExist("Sponsored session")` `ControlClick, OK, Sponsored session``Return`[Share](#) [Report](#) [Save](#)[ManyFacesz](#) -1 points · 11 months ago

I'm getting an error, "system cannot find the file specified".

Im trying to run a program called Psiphon3 which does not install but run when I double click on it. Could the fact that the software does not install be the reason it fails since it does not add itself to system folders/registry like other softwares ?
