multiple hotkeys for same action?

Started by gibbard , May 31 2012 04:47 PM

Hi everyone! I'm trying to figure out if it's possible to have two hotkeys for the same action. For example, popup a msgbox if either #1 or Joy3 is hit. The below example does NOT function, but I'm hoping there is a similar method I'm missing in the documentation. I'm trying to avoid copying the same action twice in my script, once for each hotkey...

```
#1 OR Joy3::  
msgbox, One of the hotkeys was pressed!!!  
return
```

Thanks!

There is. It's in the Hotkeys documentation.

Multiple hotkeys can be stacked vertically to have them perform the same action. For example:

```
^Numpado::
```

```
^Numpad1::
```

```
MsgBox Pressing either Control+Numpado or Control+Numpad1 will display this message.
```

```
return
```

Very similar question regarding hotstrings <!-- | -->viewtopic.php?f=1&t=87028<!-- | -->

AHA! I knew it must be somewhere! I apologize for missing that. I guess I wasn't using the right terms in my searches...
