; CHANGELOG:  
;  
; Sep 13 2007: Added more misspellings.  
;           Added fix for -ign -> -ing that ignores words like "sign".  
;           Added word beginnings/endings sections to cover more options.  
;           Added auto-accents section for words like fiancée, naïve, etc.  
; Feb 28 2007: Added other common misspellings based on MS Word AutoCorrect.  
;           Added optional auto-correction of 2 consecutive capital letters.  
; Sep 24 2006: Initial release by Jim Biancolo (http://www.biancolo.com)  
;  
; INTRODUCTION  
;  
; This is an AutoHotKey script that implements AutoCorrect against several  
; "Lists of common misspellings":  
;  
; This does not replace a proper spellchecker such as in Firefox, Word, etc.  
; It is usually better to have uncertain typos highlighted by a spellchecker  
; than to "correct" them incorrectly so that they are no longer even caught by  
; a spellchecker: it is not the job of an autocorrector to correct *all*  
; misspellings, but only those which are very obviously incorrect.  
;  
; From a suggestion by Tara Gibb, you can add your own corrections to any  
; highlighted word by hitting Win+H. These will be added to a separate file,  
; so that you can safely update this file without overwriting your changes.  
;  
; Some entries have more than one possible resolution (achive->achieve/archive)  
; or are clearly a matter of deliberate personal writing style (wanna, colour)  
;  
; These have been placed at the end of this file and commented out, so you can  
; easily edit and add them back in as you like, tailored to your preferences.
